BOLD COAST
ENERGY

Empowering Smarter Energy Decisions Through Insight + Execution

Bold Coast Energy is an independent energy management and consulting firm that acts as an extension of our clients' teams. We develop and implement strategies that mitigate risk, control costs, and address the complex challenges of managing energy data, supply, demand, and delivery infrastructure.

Bold Coast Energy provides end-to-end energy services designed to help commercial, industrial, and institutional clients reduce costs, manage risk, and meet sustainability goals. Our team delivers comprehensive solutions—from energy procurement and supply management to renewable project development, engineering, and construction.

Energy Procurement

Optimizing Energy Spend Through Market Insight and Risk-Aware Procurement

Bold Coast provides clients with access to wholesale power and natural gas pricing through our extensive network of energy trading partners, retail energy suppliers, and financial institutions. Acting as an extension of our clients' staff, we design customized procurement strategies that balance price, risk tolerance, and credit or collateral requirements.

Our Services Include

Fixed-Rate Products
for Cost Certainty and
Budget Stability

Managed Block & Index
Products for Flexibility and
Market Participation

Renewable Energy Credits
(RECs) for Sustainability and
Renewable Sourcing Goals

Virtual Power Purchase
Agreements (VPPAs) as Long-Term
Financial Hedging Instruments

Basis + NYMEX products
for transparent and
flexible market pricing

Wholesale Energy
Transactions for
Large-Scale Buyers

The Bold Coast Energy Procurement Process

Our team actively monitors energy markets to capture optimal pricing opportunities, while also delivering ongoing oversight of billing, financial reporting, and performance transparency. The result is a disciplined, data-driven approach to lowering costs and managing risk in today's dynamic energy marketplace.

Reducing Energy Costs Through Insightful, Risk-Disciplined Supply Strategies

At Bold Coast Energy, we help clients exceed their energy cost reduction and efficiency goals by aligning products and management strategies with their specific operational objectives. By combining deep market expertise with a hands-on approach, Bold Coast delivers measurable financial and operational improvements—empowering organizations to make smarter, more sustainable energy decisions with confidence.

Analyze

Collaborate with clients to assess current and future energy loads, align with sustainability goals, and map present and future load centers

Formulate

Evaluate cost and performance benefits across delivery, supply, demand response, and sustainability options

Develop

Align with clients on the best strategy to achieve objectives, developing it through analysis of detailed energy data

Execute

Execute tailored solutions that achieve clients' financial, operational, and sustainability goals—with complete independence and objectivity

Optimize

Ongoing monitoring and evaluation ensure your energy strategy remains effective and evolves throughout the partnership

Community Energy

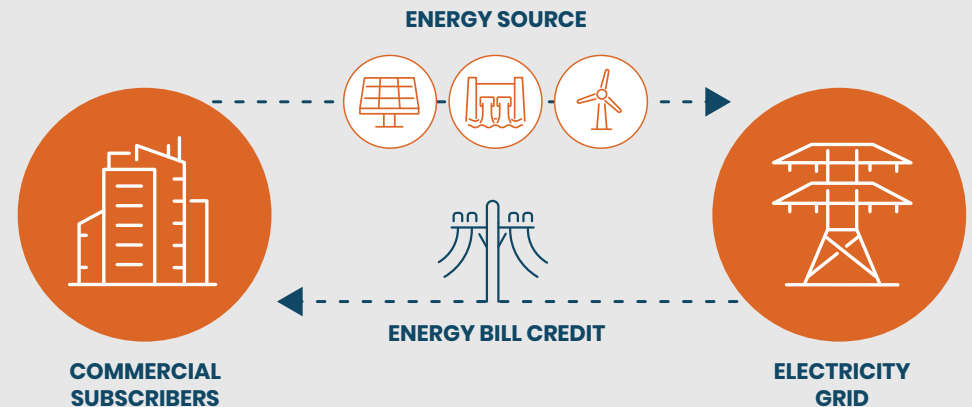

Reduce Costs. Advance Sustainability. Empower Communities

When you participate in Community Energy, you receive credits generated from a qualified renewable energy resource—such as hydro, wind, solar, or biogas.

These credits are applied directly to your utility bill, reducing some or all of your electricity costs. You will still receive your regular bill from your utility, but it will now include a line item showing the community energy credits applied.

In addition, you'll receive a separate monthly bill from Bold Coast Energy for the discounted value of those credits. The result is simple: you pay your utility less and save money each month, while supporting renewable energy development in your region.

How It Works

Energy Infrastructure

Building the Foundation for a Cleaner, More Resilient Grid

Bold Coast specializes in the development, engineering, procurement, and construction (EPC) of distributed generation assets across the Northeast.

Our mission is to deliver efficient, reliable, and cost-effective energy infrastructure that empowers organizations to operate more sustainably. By deploying private energy systems, we help clients reduce fossil fuel dependence, strengthen energy resilience, and achieve tangible decarbonization goals.

Whether the objective is to lower on-site energy costs or monetize the project through a third-party sale at completion, Bold Coast leads the way—managing every stage from concept to close.

Our Process

Site Identification & Evaluation

We work with landowners to evaluate site viability through rigorous due diligence.

Permitting

We coordinate with local, state, and federal agencies to secure all required permits to ensure compliance.

Utility Coordination

We work directly with the utility from feasibility through cost estimates to final approvals.

Revenue Sourcing

We identify and secure the revenue streams that make energy projects financially viable.

EPC & Owners Engineering Services

We serve as an independent advisor, reviewing designs, managing contractors, overseeing construction, and verifying performance.

Sale Process

Managing the full sale process—from documentation and financial models to due diligence, buyer engagement, and negotiations.
